(54) Title: A CATHETER ASSEMBLY WITH CATHETER HANDLE AND CONTAINER

(57) Abstract: The present invention relates to a catheter assembly comprising a catheter handle and a catheter assembly comprising a catheter element and a container for accommodation of the catheter element. In a first compact configuration the catheter element and the catheter handle are separated to reduce the length of the catheter assembly. The catheter element is in the container and the catheter handle is attached on the outside of the container assembly. The catheter handle can be detached and interlocked with the catheter element to constitute in a second configuration a catheter device.
